The graph displays arsenic concentration in groundwater over a 35-year period. The y-axis represents concentration in µg/L, ranging from 0 to 500. The x-axis shows dates from July 1981 to December 2016. A red horizontal line at 20 µg/L indicates the regulatory limit. Five data series are plotted: B1 (black diamonds), B2 (pink squares), B3 (green triangles), B16 (blue crosses), and B18 (yellow circles). B1 shows the highest concentrations, peaking around 450 µg/L in 1981 and remaining high until 1990, then dropping sharply. B2 shows a significant peak around 300 µg/L in 1981. B3, B16, and B18 generally show lower concentrations, mostly below 100 µg/L, with some fluctuations. The red line is consistently at 20 µg/L.

| Date    | B1 [µg/L] | B2 [µg/L] | B3 [µg/L] | B16 [µg/L] | B18 [µg/L] |
